

A LOW COST WEB BASED REMOTE MONITORING SYSTEM WITH BUILT-IN SECURITY FEATURE FOR VULNERABLE ENVIRONMENTS

AIM:

The main of this project is Monitoring and security of the industrial environments by Web Based application

EXISTED METHOD:

In olden days industrial environments were without monitoring and without security .If we are not monitoring those environments then we don't know what's happening in different areas. If we are not providing security then we get a problem .Then we can loss money and things. These are disadvantages of the existed method.

ADVANTAGES:

- We can save time and cost.
